INT LEXICONSERVICE – AVAILABLE HOSTS AND LEXICA

Author: Mathieu Fannee, INT – April 2021

CURRENT LEXICONSERVICE HOST

The INT LexiconService is now available at this host:

https://sk.taalbanknederlands.inl.nl/

Please replace the sample hostname mentioned in the LexiconService Manual by the address here above.

TEST PAGE

The test page of the LexiconService can be found at:

https://sk.taalbanknederlands.inl.nl/LexiconService/

AVAILABLE LEXICA

Lexica can be addressed by using the 'database' parameter in your queries.

For example: (check the LexiconService Manual to read about how to write queries)

```
https://sk.taalbanknederlands.inl.nl/LexiconService/lexicon/get_lemma?
database=<your_dataset>&wordform=<some word>
```

Some lexica consist of separate datasets (see following table). If you wish to limit your queries to a particular dataset, just add the dataset parameter to them:

```
https://sk.taalbanknederlands.inl.nl/LexiconService/lexicon/get_lemma?
database=<your_dataset>&wordform=<some word>&dataset=<some_dataset>
```

The available lexica are listed on the following page.

These lexica are available right now. The following table describes shortly their content and the right 'database' parameter value to use them:

Lexicon name	Period	Database parameter value
Medieval Dutch	**ca. 1250 – 1550**	database=mnwlex
Early Modern Modern Dutch	**ca. 1500 – 1976**	database=lexicon_service_db
Medieval Dutch Early Modern Dutch Modern Dutch	**ca. 1250 – 1976**	database=lexiconservice_mnw_wnt
Modern Dutch	**Present day**	database=molex
Names	**Mainly 19/20th century**	database=nameslex This lexicon contains two datasets, which can be addressed separately: • dataset=names_gn (given names) • dataset=names_sgn (surnames)
